

Project Design Phase-II

Data Flow Diagram

Date	29 September 2026
Team ID	6ab75b2068850e4f5dce0e19
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Data Flow Diagram:

The DFD shows how an IT support request enters the system, is processed by ServiceNow Flow Designer, classified using predefined keywords, stored in Ticket Records, and followed by caller notification.

DFD Level 0 — Auto Ticket Classification Workflow

Project Design Phase-II

User Stories

Date	29 September 2026	Team ID	6ab75b2068850e4f5dce0e19
Project Name	Auto Ticket Classification using Flow Designer	Maximum Marks	4 Marks

The following user stories are limited to the actual project scope: ticket creation, automatic classification, Category/Subcategory assignment, dependent choice logic, caller notification, structured Ticket Records, and maintainable Flow Designer rules.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Student / Teacher (Caller)	Ticket Creation & Storage	US-1	As a caller, I can submit an IT support request with the issue details so that the request is stored as a Ticket Record.	A Ticket Record is created with the submitted caller and issue information, including Short Description and Description.	High	Release-1
ServiceNow Flow Designer	Automatic Ticket Classification	US-2	As the system, I can analyze the ticket issue description and identify the relevant issue type using the project's predefined keywords.	WiFi, Projector, Password/Login, and Slow/Hanging inputs are identified according to the configured classification rules.	High	Release-1
ServiceNow Flow Designer	Category & Subcategory Assignment	US-3	As the system, I can automatically assign both Category and Subcategory based on the identified issue without manual intervention.	The configured mappings assign the correct pair: Network/Wi-Fi, Hardware/Projector, Access/Forgot Password, or Performance/Slow Computer.	High	Release-1
IT Helpdesk Staff	Dependent Category / Subcategory	US-4	As an IT helpdesk staff member, I can use dependent Category/Subcategory choices so that Subcategory options correspond to the selected Category.	Subcategory choices follow the configured dependency: Network→Wi-Fi, Hardware→Projector, Access→Forgot Password, Performance→Slow Computer.	High	Release-1
Student / Teacher (Caller)	Caller Notification	US-5	As a caller, I receive an automated email when my support ticket is created so that I have confirmation of the submitted request.	The system sends an email notification to the Caller after ticket creation with the ticket confirmation message.	High	Release-1
IT Helpdesk Staff / ServiceNow Admin	Structured Records & Maintenance	US-6	As an IT helpdesk staff member or ServiceNow administrator, I can use standardized Ticket Records and maintain the classification flow as requirements grow.	Ticket information is stored in the defined Ticket Records structure, and the no-code Flow Designer rules can be maintained for future scalability.	Medium	Release-1

Project-specific classification mappings: WiFi → Network / Wi-Fi; Projector → Hardware / Projector; Password or Login → Access / Forgot Password; Slow or Hanging → Performance / Slow Computer.
