

Project Design Phase-II

Technology Stack (Architecture & Stack)

Date	29 September 2026	Team ID	6ab75b2068850e4f5dce0e19
Project Name	Auto Ticket Classification using Flow Designer	Maximum Marks	4 Marks

Technical architecture :

The Deliverable shall include the architectural diagram as below and the information as per the table1 & table 2

Architecture: Auto Ticket Classification using ServiceNow Flow Designer

USER / CALLER	SERVICENOW PLATFORM	HELPPDESK / ADMIN	Guidelines:
Student / Teacher Create IT Support Ticket Enter issue details	Ticket Records u_ticket_records Flow Designer Classification logic Email Notification	IT Helpdesk Staff Review / manage tickets ServiceNow Admin	
New ticket →	Classify using predefined rules	← Classified ticket / notification	
Classification Rules	Category / Subcategory		
WiFi → Network	WiFi → Network / Wi-Fi		
Projector → Hardware	Projector → Hardware / Projector		
Password or Login → Access	Password or Login → Access / Forgot Password		
Slow or Hanging → Performance	Slow or Hanging → Performance / Slow Computer		

Table-1 : Components & Technologies:

S.No	Component	Description	Technology
1.	User Interface	How user interacts with application e.g. ticket creation form and Ticket Records.	ServiceNow UI / Ticket Records form
2.	Application Logic-1	Logic for the ticket classification process.	ServiceNow Flow Designer
3.	Application Logic-2	Logic for keyword-based classification and Category/Subcategory assignment.	Flow Designer Conditions / Rules
4.	Application Logic-3	Logic for notifying the caller after ticket creation.	ServiceNow Email Notification
5.	Database	Ticket data and configurations stored in structured records.	ServiceNow Ticket Records [u_ticket_records]
6.	Cloud Database	Database service on Cloud.	Not separately used in project
7.	File Storage	File storage requirements.	Not separately used in implemented workflow
8.	External API-1	Purpose of External API used in the application.	Not used in project
9.	External API-2	Purpose of External API used in the application.	Not used in project
10.	Machine Learning Model	Purpose of Machine Learning Model.	Not applicable; predefined Flow Designer rules are used
11.	Infrastructure (Server / Cloud)	Application deployment / runtime environment.	ServiceNow platform / Developer instance

Table-2: Application Characteristics:

S.No	Characteristics	Description	Technology
1.	Open-Source Frameworks	List the open-source frameworks used.	No separate open-source framework; ServiceNow platform tools
2.	Security Implementations	List all the security / access controls implemented, use of firewalls etc.	No project-specific security implementation specified

S.No	Characteristics	Description	Technology
3.	Scalable Architecture	Justify the scalability of architecture (3-tier, Micro-services). The standardized Ticket Records and maintainable Flow Designer rules support future additions.	ServiceNow Flow Designer + Ticket Records
4.	Availability	Justify the availability of application.	No separate availability configuration specified in source project material
5.	Performance	Design consideration for the performance of the application (number of requests per sec. use of Cache, use of CDN's etc.). Automation classifies tickets at creation time, reducing manual review and improving routing efficiency.	Flow Designer automation
